

1.Requirement:

- **Node.js:** v22.x LTS (or v20.19+ as an alternative)
- **PostgreSQL:** v16 (v14 or v15 also acceptable)
- **Nginx:** for reverse proxy, TLS termination, and serving the frontend static build
- **Redis:** optional — please install if we're deploying more than one backend instance

3. Nginx Configuration Needed

4. Create a PostgreSQL database and a dedicated application user with full privileges on that database

5. Firewall: block public access to PostgreSQL (5432) and Redis (6379) ports

6. SSH access (key-based) for our team to deploy the application code and manage environment configuration ourselves
